

CABLE MANAGEMENT Accessories

Cable Manager

Cable Manager A

Cable managers are useful for routing cables horizontally along the front of the cabinet without sagging. This helps to provide a neat and uncluttered overall appearance.

Ordering Information

Cable Manager, 1U,19" Mounting	86-1633
Cable Manager, 2U,19" Mounting	86-1720
Cable Manager, 1U,19", Rod Loops	86-1663
Cable Manager, 2U,19", Rod Loops	86-1664

Cable Channel

Cable Channel A

Cable channels, with cabling loops, are made of steel and are meant to be fitted vertically along the side of the cabinets at the rear. Use of these cable channels make it possible to run cables in an orderly and structured manner.

Ordering Information

Channel with Cable Loops, 24U	86-1781
Channel with Cable Loops, 30U	86-1782
Channel with Cable Loops, 36U	86-1783
Channel with Cable Loops, 42U	86-1784

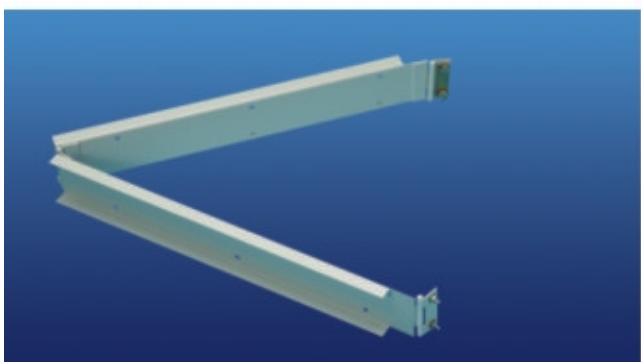

Cable Loop

Cable Loops A

For neat cable management, cable loops can be fixed to the inside face of the vertical corner pillars. Cable loops may also be fitted on cross members at the rear of the rack, or on panel mounting supports on the sides of the cabinet.

Ordering Information

Cable Loop, Single - flat	86-1717
Cable Loops - rod, 30mm	86-1661
Cable Loops - rod, 50mm	86-1662

Cable Extender

Cable Extender CX CY

Cable extenders are for supporting cable assemblies and wiring connected to equipment that needs to be drawn out of the cabinet. Cable extenders not only support the cables but also prevent sagging.

CABLE CONTROL

A wide range of cable control accessories ensure that the CAT5 cabling / OFC installation meets EIA / TIA-568-A standards. These accessories prevent deterioration of data transmission performance over time. Using these accessories speeds up cable dressing during installation and maintenance.

Cabling Bobbins (A)

Semi-circular cabling bobbins can be used to guide, support and store cables. The bobbins can be fitted either directly to the vertical reducing channels or onto the panel mounting support angles.

Cable Retention Bobbins (CX) (CY)

Cable retention bobbins have been designed to be used with the 800mm wide Cyberack, Cyberack Dlx and SmartRack cabinets. They are fitted onto reducing cable channels.

These bobbins hold the cables along the reducing cable channels and control the cables bend radii when they are taken across on to the horizontal cable management panels.

The maximum number of cable retention bobbins that can be fitted onto a pair of reducing cable channels is as follows:

36U/37U/38U	42U/44U/45U
16	18

Window Moulding (CX) (CY)

Window mouldings are fitted on to reducing cable channels used with 800mm wide cabinets. They clip into the apertures in the reducing cable channels providing a smooth curved edge through which cables can be passed.

Window mouldings can be used along with the cable retention bobbins. They can be fitted to both the front and rear of each aperture in the reducing cable channel if desired. The maximum number of window mouldings that can be fitted onto a pair of reducing cable channels is as follows :

36U/37U/38U	42U/44U/45U
14	16

Cable Management Panel, 1U (A)

19" cable management panels are fitted with four semicircular bobbins, which support and control the cable radii. Cable ties, or velcro ties, can be utilised to fix the cables to the bobbins, if desired.

Cable Management Panel, 2U (A)

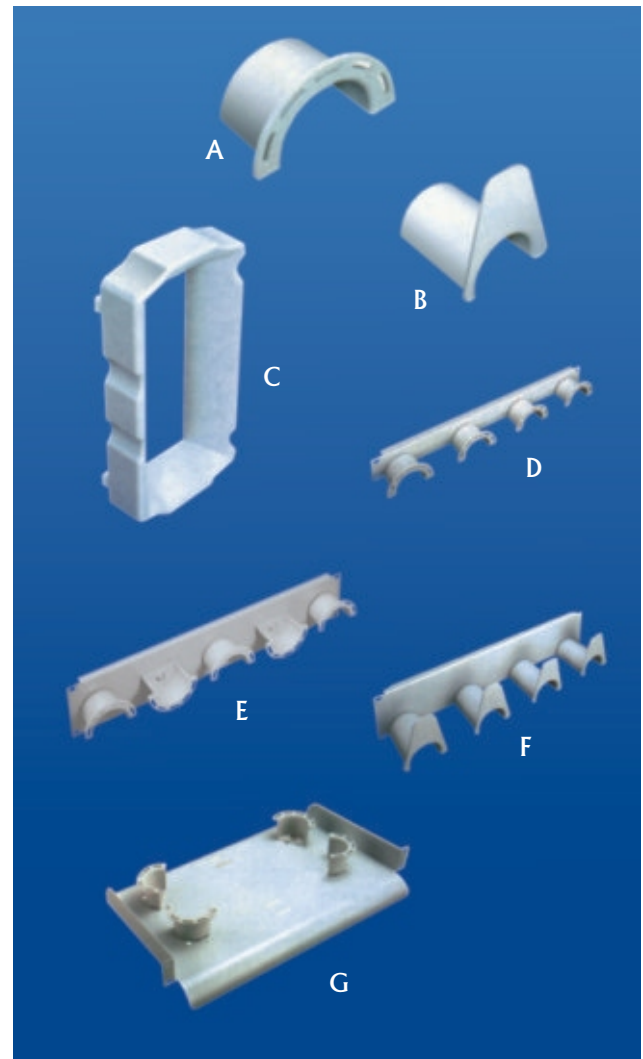

19" cable management panels are fitted with five semicircular bobbins mounted alternatively. Cable ties, or velcro ties, can be utilised to fix the cables to the bobbins, if desired.

2U CAT5 Cable Retention Panel (A)

19" cable management panel is fitted with four cable retention bobbins. The cable retention bobbins support and control the cable radii, as well as, forming a cabling trough which alleviates the need for cable ties or velcro ties.

2U Cable Storage Shelf (A)

2U 19" shelf unit is supplied complete with four semicircular bobbins. The shelf provides storage for excess lengths of patch cords.
